© COPYRIGHT MIURA GOLF

The Miura story is one of family, passion, and precision. It's one focused on the power of touch and a belief in meticulous attention to detail. It's one grounded by an unwavering commitment to the pursuit of perfection.

It begins in Himeiji, Japan, with the art and discipline of samurai and ends with the finest hand-crafted golf clubs known to man. Our founder, Katsuhiro Miura, set out to make something elegant and refined, to create something beautiful, with the highest degree of integrity, something that isn't done in the golf industry.

His patience and unique forging process ensures the grain of the steel is fine and uniformed, leading to a feel unlike anything else. The Miura feel. Every club is hand-crafted, one-by-one, and touched by Miura-San or one of his two sons, Shinei and Yoshitaka.

From our family to yours, we welcome you to the fraternity of feel.

Table of Contents

- LH TB-901

МВ-101

The MB-101 incorporates the best characteristics of early Miura designs and models. The subtle refinements to the sole, allow the club to travel effortlessly through the turf. The sole width and face thickness have been optimized (from our MB-001) allowing for heightened feel and feedback.

TC-201

The TC-201 offers the performance of a muscle back with the increased forgiveness of a cavity back. The progressive weighting in the sole provides a lower center of gravity in the long irons for added height and higher trajectory on longer shots. Slightly changing to a higher center of gravity in the short irons creates a lower trajectory and more control on shorter shots. Constant weight towards the heel and toe helps with off-center shots. The sole design contributes significantly to the playability and forgiveness of this club.

CB-301

The CB-301 is the longest forged cavity-back iron Miura Golf has ever produced. Each club is engineered with a variable sole and cavity thickness designed to optimize performance and center of gravity. This technology enables the CB-301 to deliver the largest sweet spot and impact area ever produced in Miura's history. The results are performance and feel that are unmatched in the industry. The CB-301 is designed for all handicap levels.

PI-401

The PI-401 cavity back iron was designed for players of every skill level. Shinei Miura sought to design an iron which delivered exceptional forgiveness, while maximizing distance. The PI-401 combines the renowned Miura "feel" with performance enhancing technology, enabling the golfer to get the most out of their game.

FACE

Made from premium S35C carbon steel, the face of the PI-401 at 3.6mm will help deliver increased ball speed with higher trajectory. With optimal face thickness and larger sweet spot, the PI-401 sounds as good as it looks.

SOLE

Optimizing turf interaction was key in the development of this revolutionary sole design. The wider sole features four separate angles highlighted by the leading-edge grind. This specific grind ensures less resistance through the turf, the best ball on face contact, which in turn delivers a desired trajectory. The PI-401's unique sole design allows for high performance and shot making from a variety of lies and conditions.

FACE PROGRESSION

With just the right amount of face progression, the PI-401 head shape is appealing to both beginners and advanced players alike.

MC-501

The MC-501 combines the playability of a blade with the forgiveness of a cavity back. Incorporating the iconic "Y" Grind created by Yoshitaka Miura, the MC-501 delivers solid ball contact and will appeal to players beyond the low-handicapped golfer.

IC-601

An optimized low center of gravity is the byproduct of the inner cavity design of the IC-601. Combined with a back weight screw and a 455 carpenter steel face, this Miura iron delivers custom fit options which produce greater distance, more forgiveness, and tighter dispersion.

CB-801

The LH Blade is engineered to provide the same purity of the strike found in all Miura clubs. The special muscle shape, with its gently curved defining line, distributes the weight of the head to where it's needed most for giving left-handed golfers the impact quality and feedback they need to excel.

TB-901

The TB-901 has a modified toe profile with a subtle shift in weight from toe to heel, allowing the player to more easily square up the club head at impact. Yoshitaka's infamous "Y" Grind has allowed Miura to deliver two additional offerings to the left-handed golfer.

K-Grind 2.0

The Miura 1957 K-Grind Wedge is one of the most recognizable wedges ever made with their signature "knuckles" or fluted sole. Specifically designed to reduce twisting from rough and glide through the sand. The 2.0 features a more modern sole design with increased bounce and roll and the grooves have been milled to provide increased spin on intermediate and full shots.

Tour Wedge

The Tour Wedge delivers the legendary feel golfers covet. The wedge does not chase distance like other clubs, but rather precision and control necessary for scoring. This design is the first from Miura using CNC milling for the face and grooves, allowing for ultimate spin control.

Tour Wedge HB

The tour inspired head shape confidently aligns the golfer allowing for pinpoint accuracy. The Tour Wedge HB boasts a wider sole that tapers from toe to heel. This design allows for a more effective bounce along the middle of the sole. The added C Grind (heel and toe relief) and camber (front to back relief) increases playability and forgiveness.
